Key Business Insights

- Fast-moving products generate high sales demand and should be monitored daily to avoid stock-risk situations.
- Products with repeated stock-risk records need higher reorder levels and faster replenishment planning.
- Dead inventory products have available stock but low sales movement, which blocks storage space and working capital.
- Category-wise stock-risk analysis helps identify which product groups need better demand forecasting.
- Store-wise stock-risk analysis helps identify locations where inventory planning or restocking needs improvement.

Business Recommendations

1. Increase safety stock for fast-moving products.
2. Reduce purchase quantity for dead inventory products.
3. Set different reorder levels for different categories.
4. Monitor stock-risk products daily.
5. Use store-level sales trends to improve local inventory planning.
